

Your goal is to generate a new React form component based on the templates in the Github repo [contoso/react-templates](#).

Use the `#tool:vscode/askQuestions` to ask for the form name and fields if not provided.

Requirements for the form:

- Use form design system components: [design-system/Form.md](#)
- Use `react-hook-form` for form state management:
- Always define TypeScript types for your form data
- Prefer *uncontrolled* components using `register`
- Use `defaultValues` to prevent unnecessary rerenders
- Use `yup` for validation:
- Create reusable validation schemas in separate files
- Use TypeScript types to ensure type safety
- Customize UX-friendly validation rules
